Android Service的 Proxy-Stub设计模式(c)

By 高煥堂

4、举例：以既有的 SensorService为例

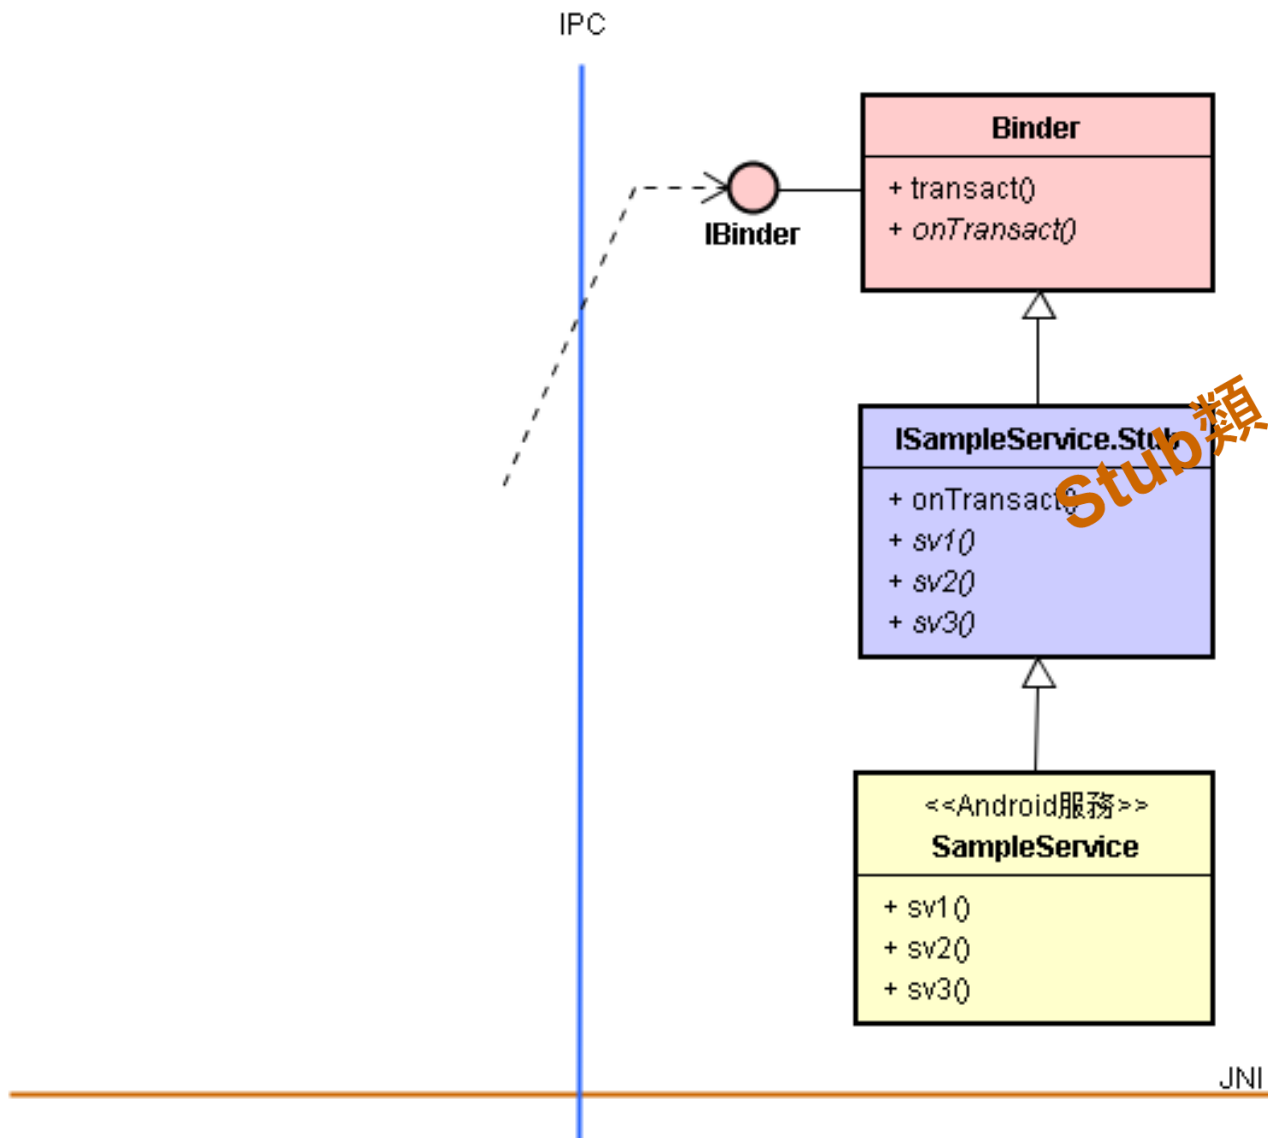

它的Stub和Proxy类

- 从上一节里，可以看出使用AIDL来(生成Stub类)包装Android Service的要点：

1.地头蛇(服务开发者)定义一个ISampleService接口。

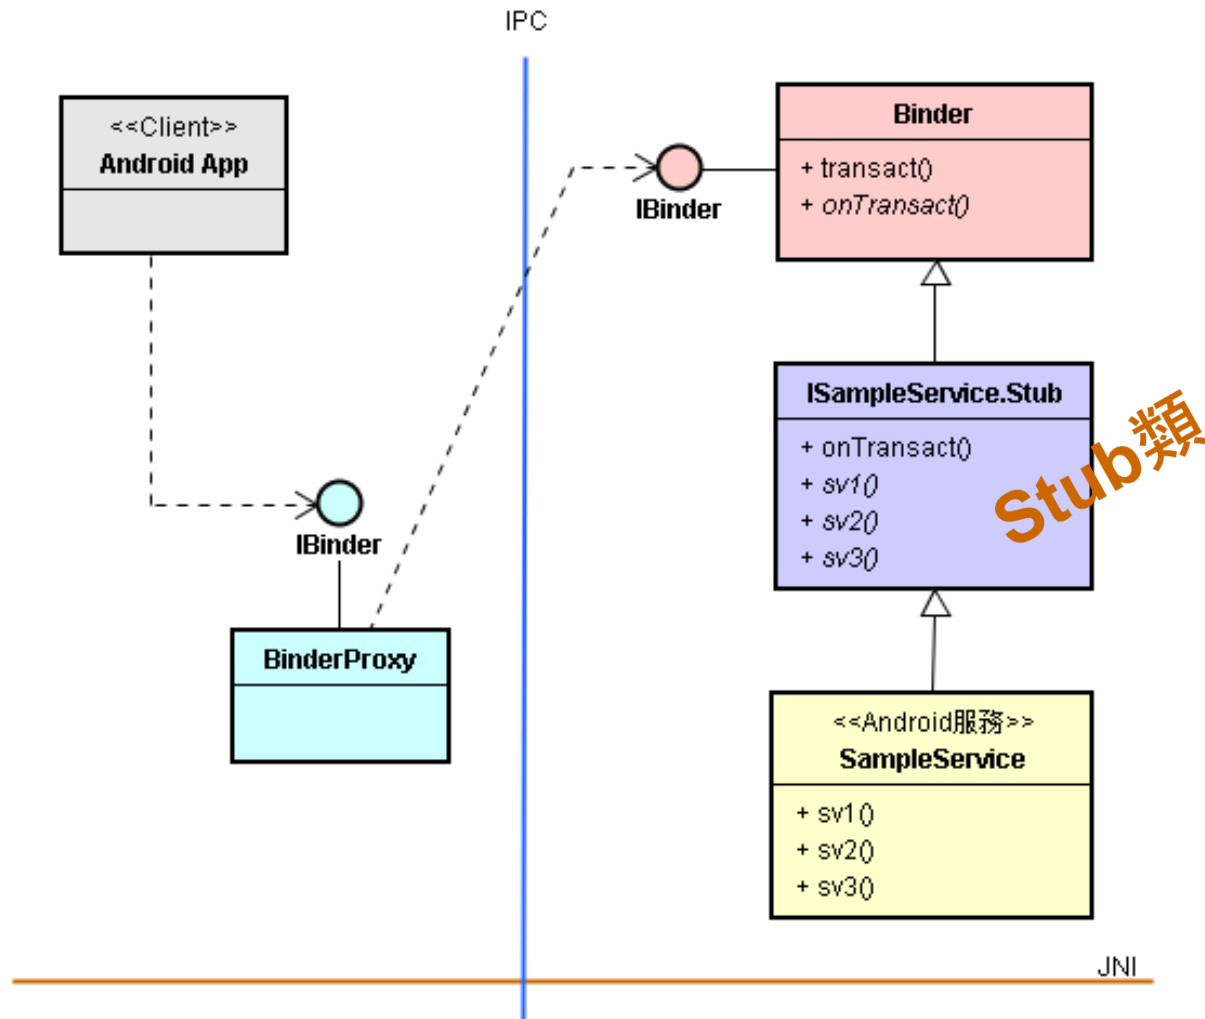

2. 使用强龙提供的AIDL工具去读取接口定义檔，产生一个Stub类和Proxy类；这个Stub类就是：ISampleService.Stub类。
3. 然后，撰写一个SampleService类来继承ISampleService.Stub基类。

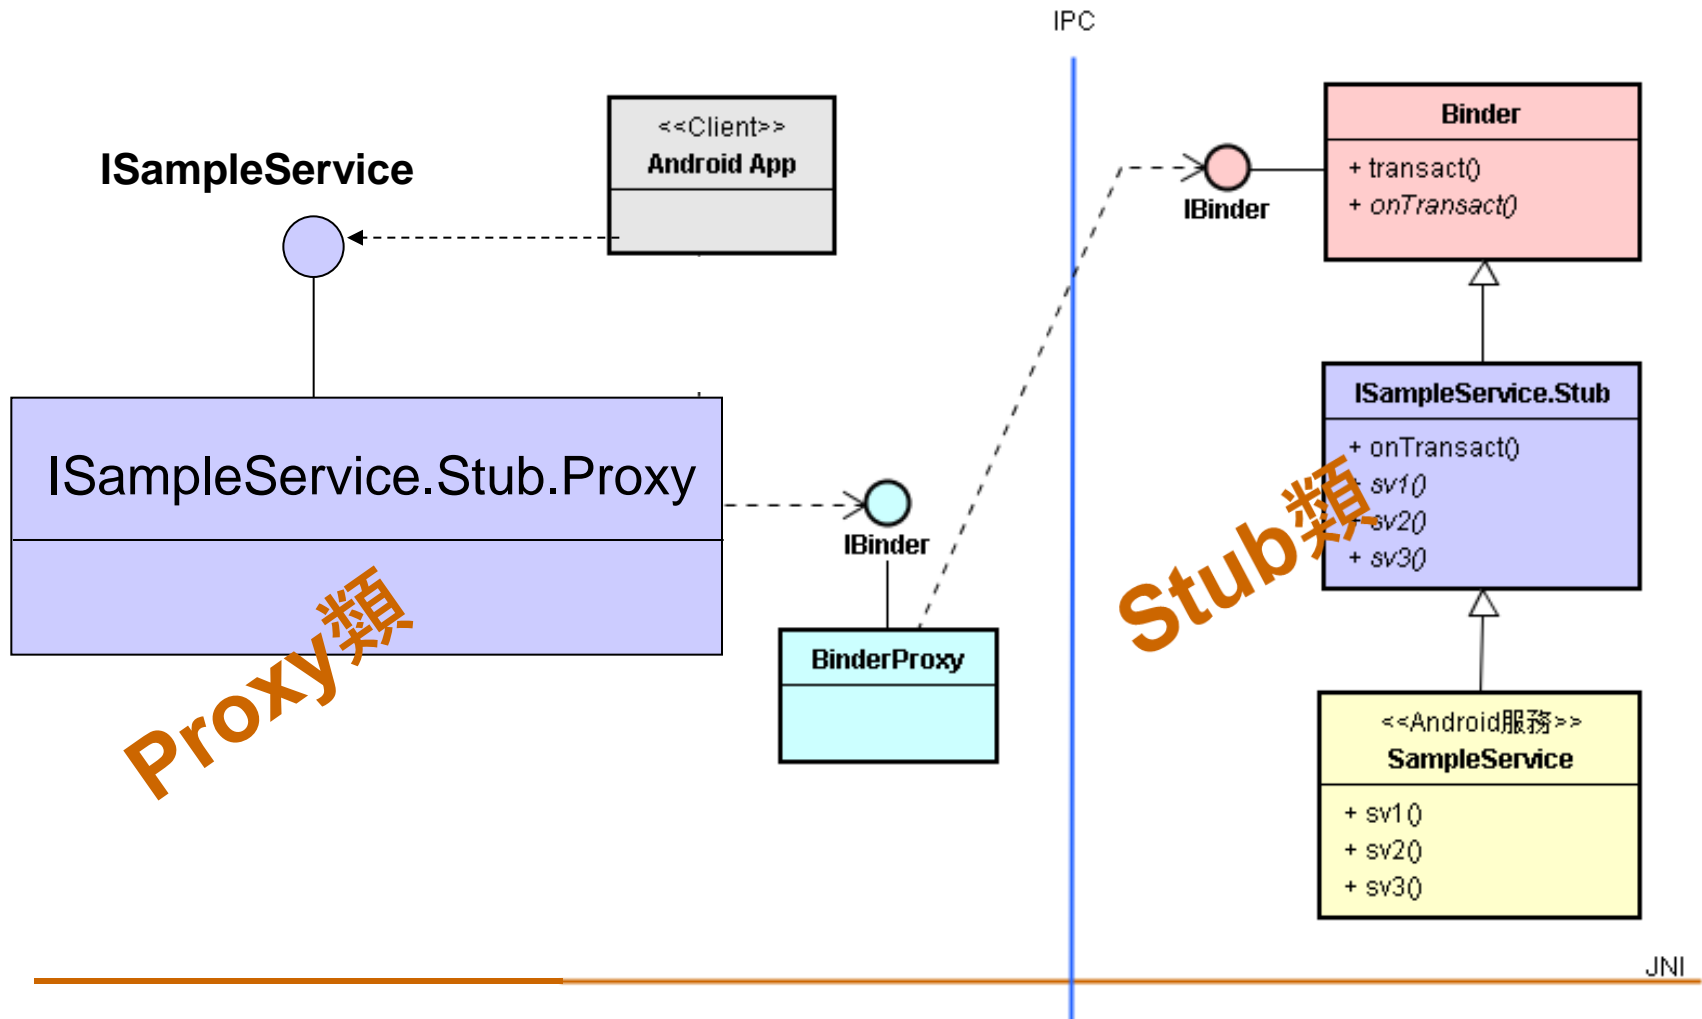

```
public class myActivity extends Activity {  
    @Override  
    public void onCreate(Bundle savedInstanceState) {  
        // .....  
        IBinder m_ib = ServiceManager.getService("CS001");  
        ISampleService m_obj =  
            ISampleService.Stub.asInterface( m_ib );  
        // .....  
        m_obj.f1(255);  
        m_obj.f2(17.35);  
        // .....  
    }  
}
```

```
IBinder m_ib = ServiceManager.getService("CS001");
```

```
ISampleService m_obj =  
    ISampleService.Stub.asInterface( m_ib );
```

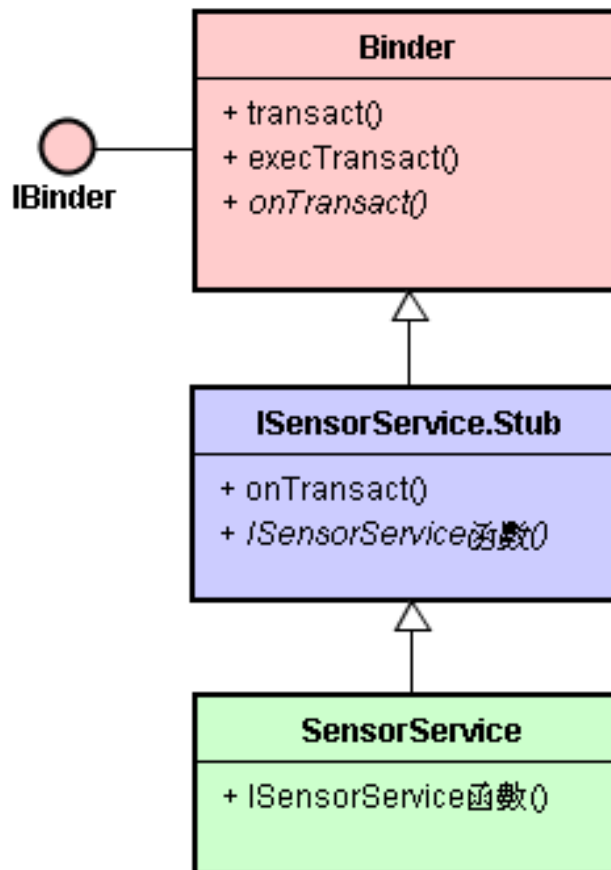

观摩ISensorService.Stub类

- 于是可得知，在Android (1.x和2.x版)的框架里，其SensorService类别就继承了ISensorService.Stub类，如下述代码：

```
// framework/base/services/java/SensorService.java
//-----
class SensorService extends ISensorService.Stub {
    //.....
    // (省略)
    //.....
    private static native int _sensors_control_init();
    private static native ParcelFileDescriptor _sensors_control_open();
    private static native boolean _sensors_control_activate(int sensor,
        boolean activate);
    private static native int _sensors_control_set_delay(int ms);
    private static native int _sensors_control_wake();
}
```

IPC

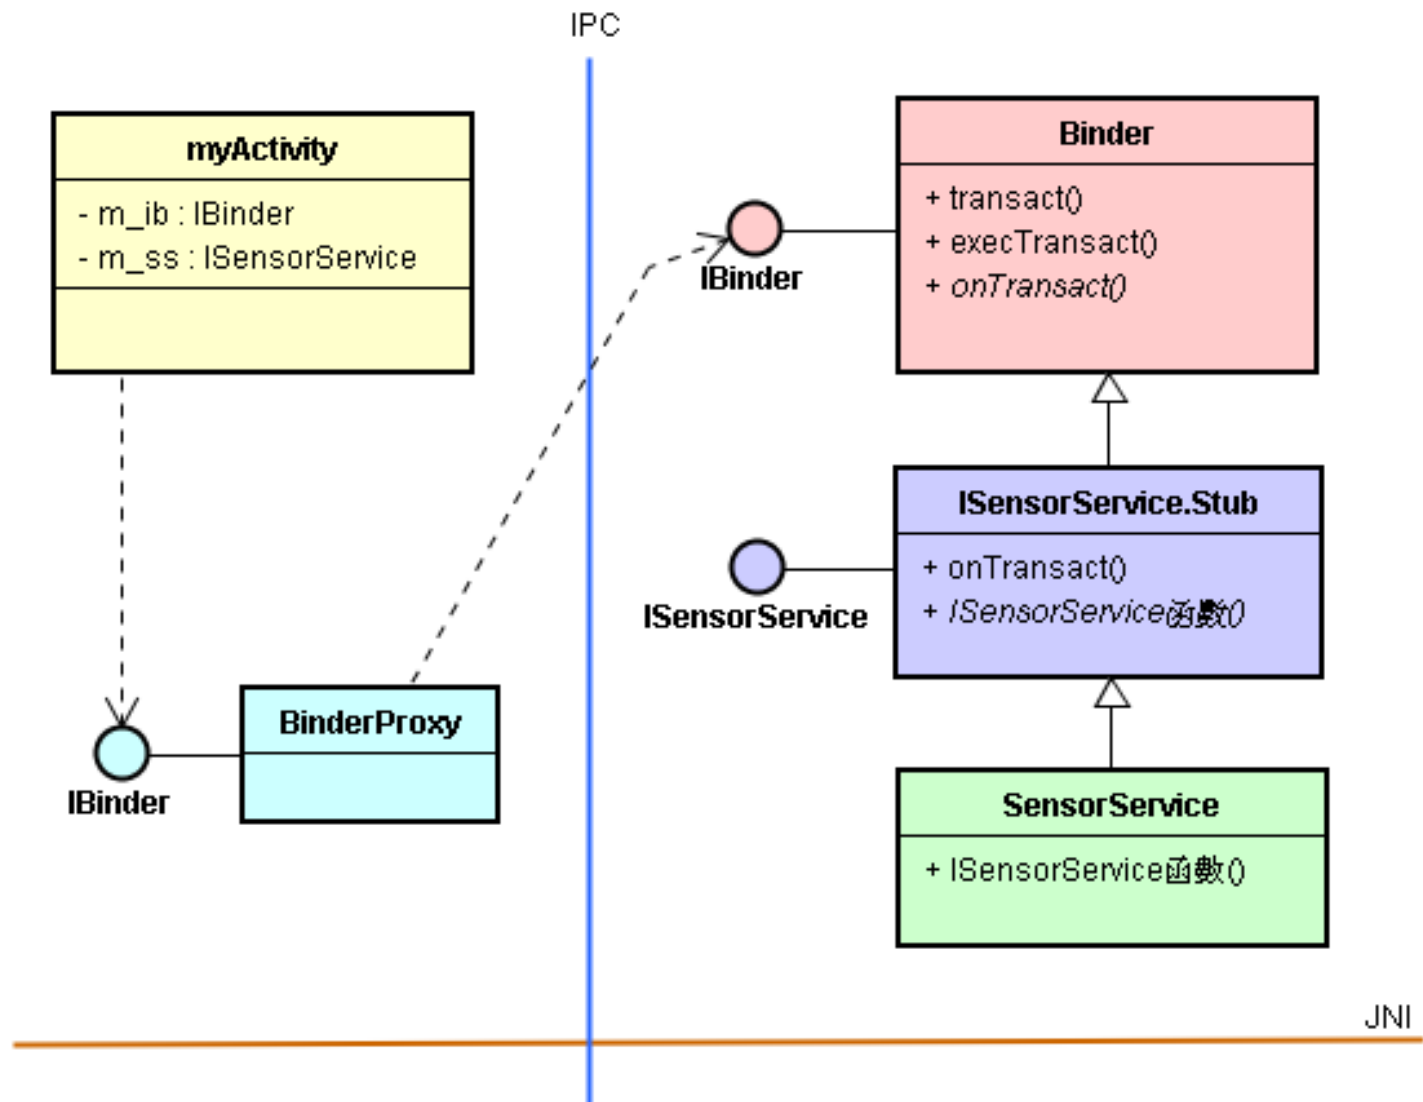

JNI

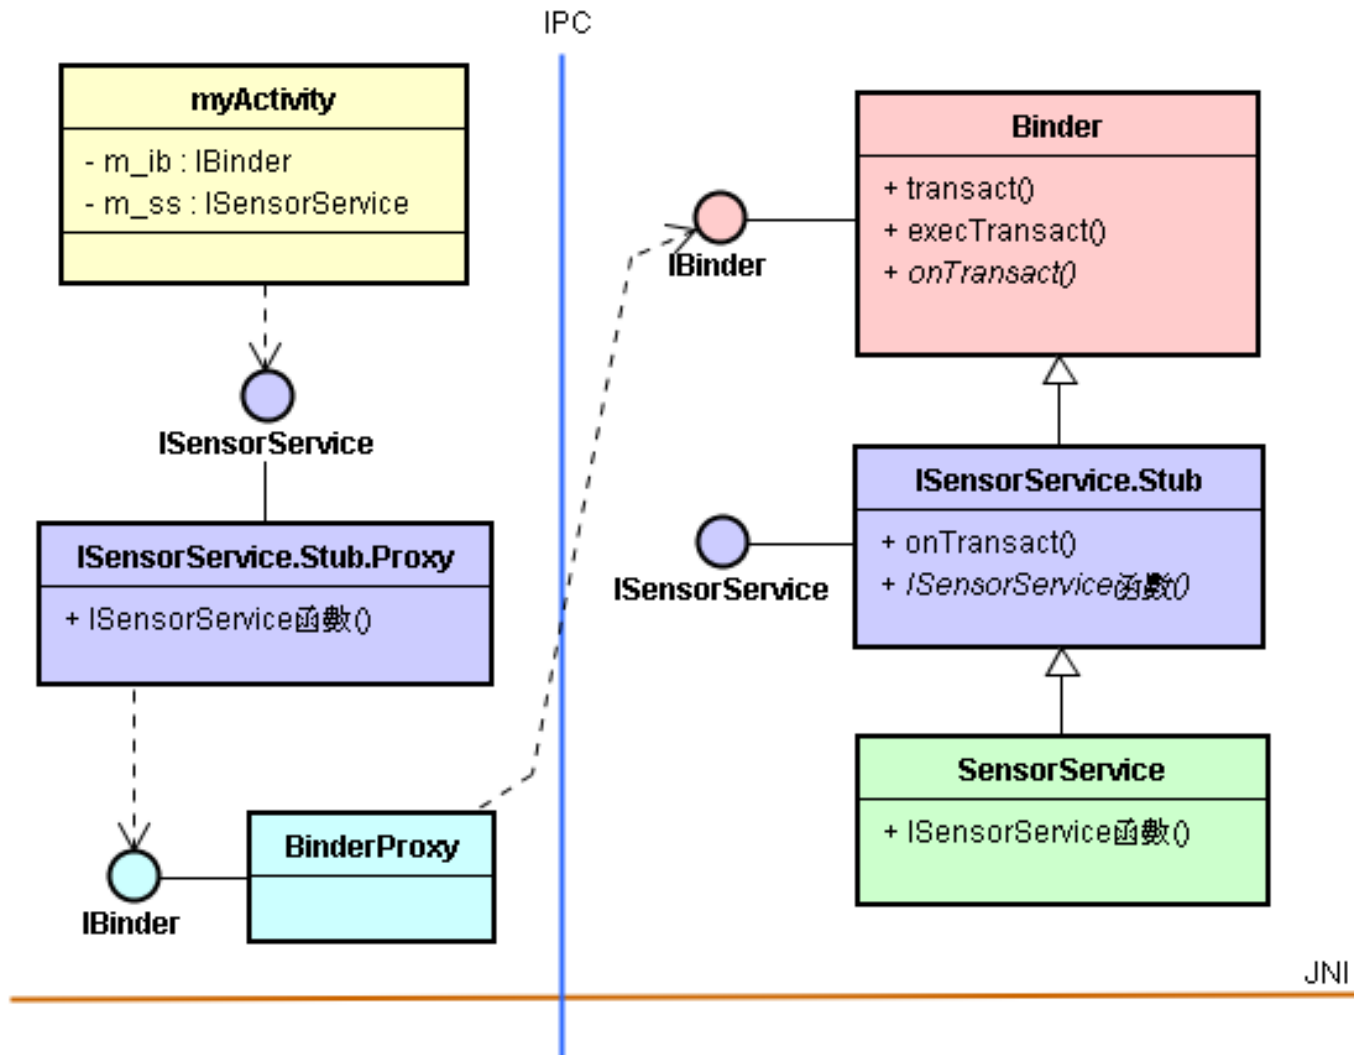

```
public class myActivity extends Activity {  
    private static final String TAG="myActivity";  
  
    public void onCreate(Bundle savedInstanceState) {  
        super.onCreate(savedInstanceState);  
        setContentView(R.layout.main);  
  
        IBinder m_ib = ServiceManager.getService(  
                                Context.SENSOR_SERVICE));  
        ISensorService m_ss =  
            ISensorService.Stub.asInterface( m_ib );  
        // .....  
    }  
    // .....  
}
```

IBinder m_ib

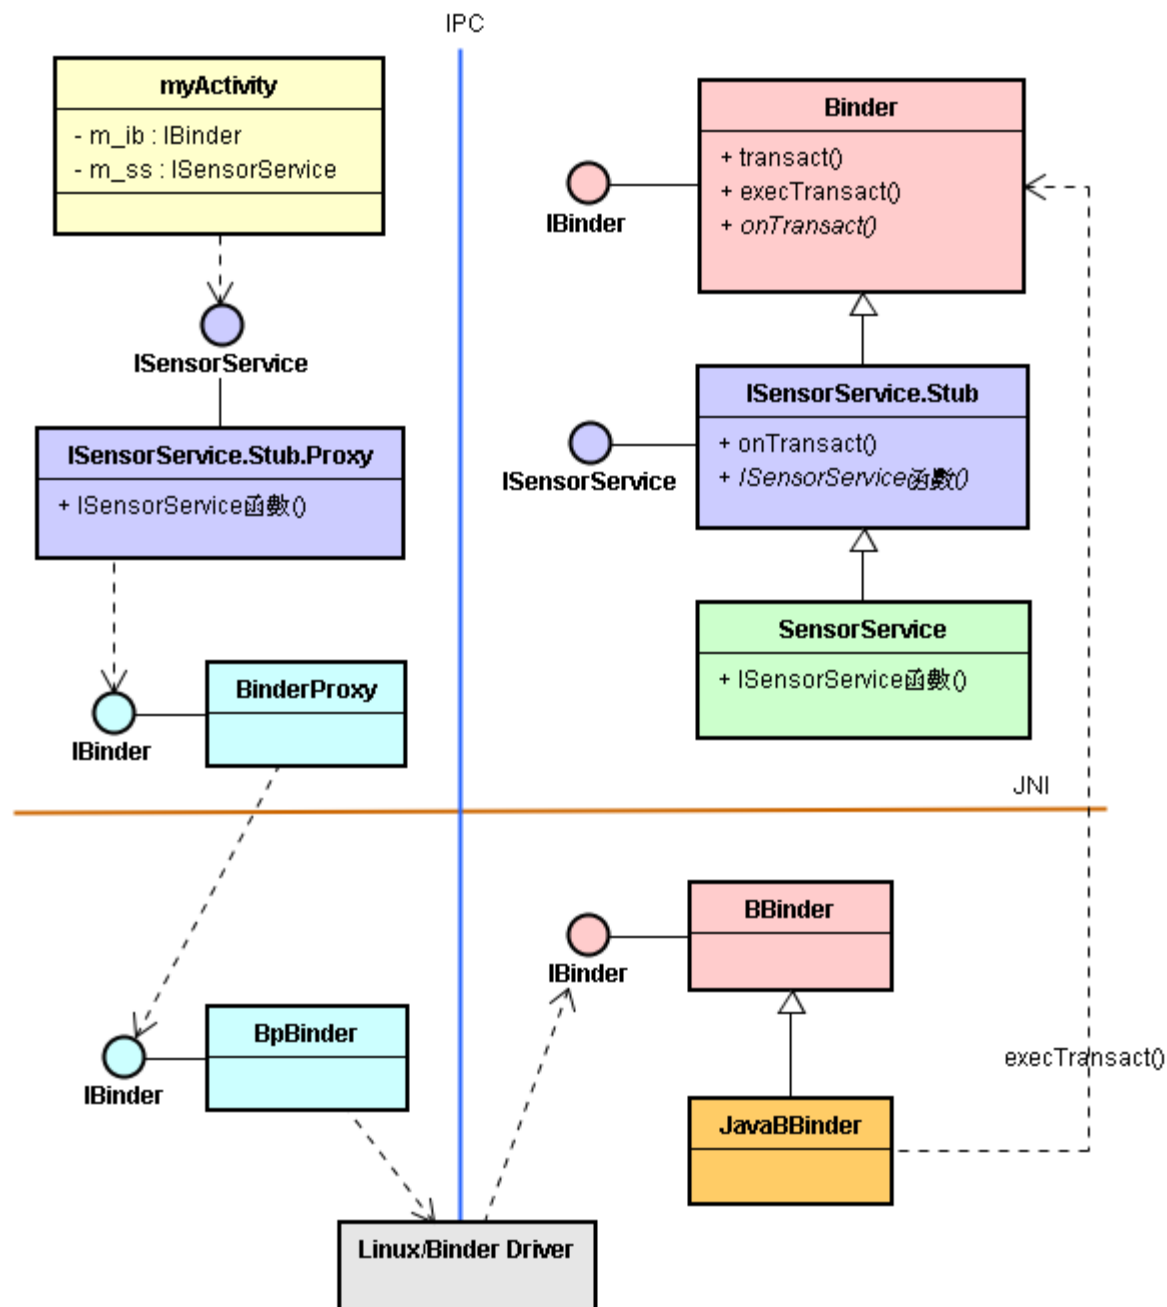

= ServiceManager.getService(Context.SENSOR_SERVICE));

```
ISensorService m_ss =  
    ISensorService.Stub.asInterface( m_ib );
```

```
/**
 * Cast an IBinder object into an ISensorService interface,
 * generating a proxy if needed.
 */
public static
android.hardware.ISensorService asInterface(android.os.IBinder obj)
{
    if ((obj==null)) return null;
    android.hardware.ISensorService in =
        android.hardware.ISensorService)obj.queryLocalInterface(
            DESCRIPTOR);
    if ((in!=null)) return in;
    return new android.hardware.ISensorService.Stub.Proxy(obj);
}
```

Thanks...

高煥堂
