A10_e

介绍Android的 Java层应用框架(e)

By 高煥堂

8、认识ContentProvider

Activity启动和使用Content Provider

AndroidManifest.xml

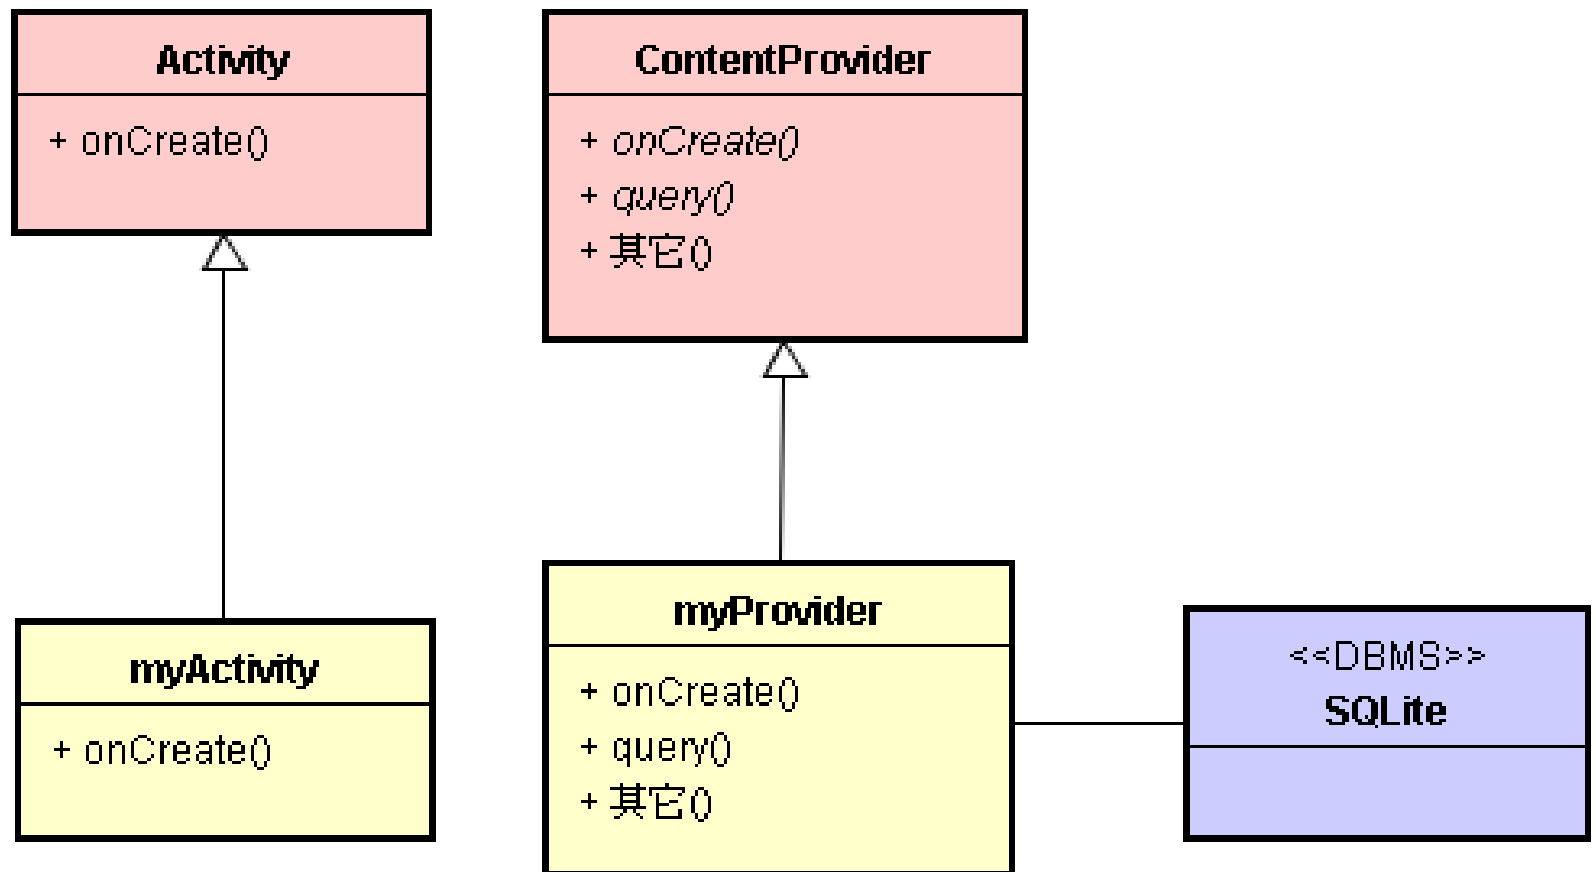

//

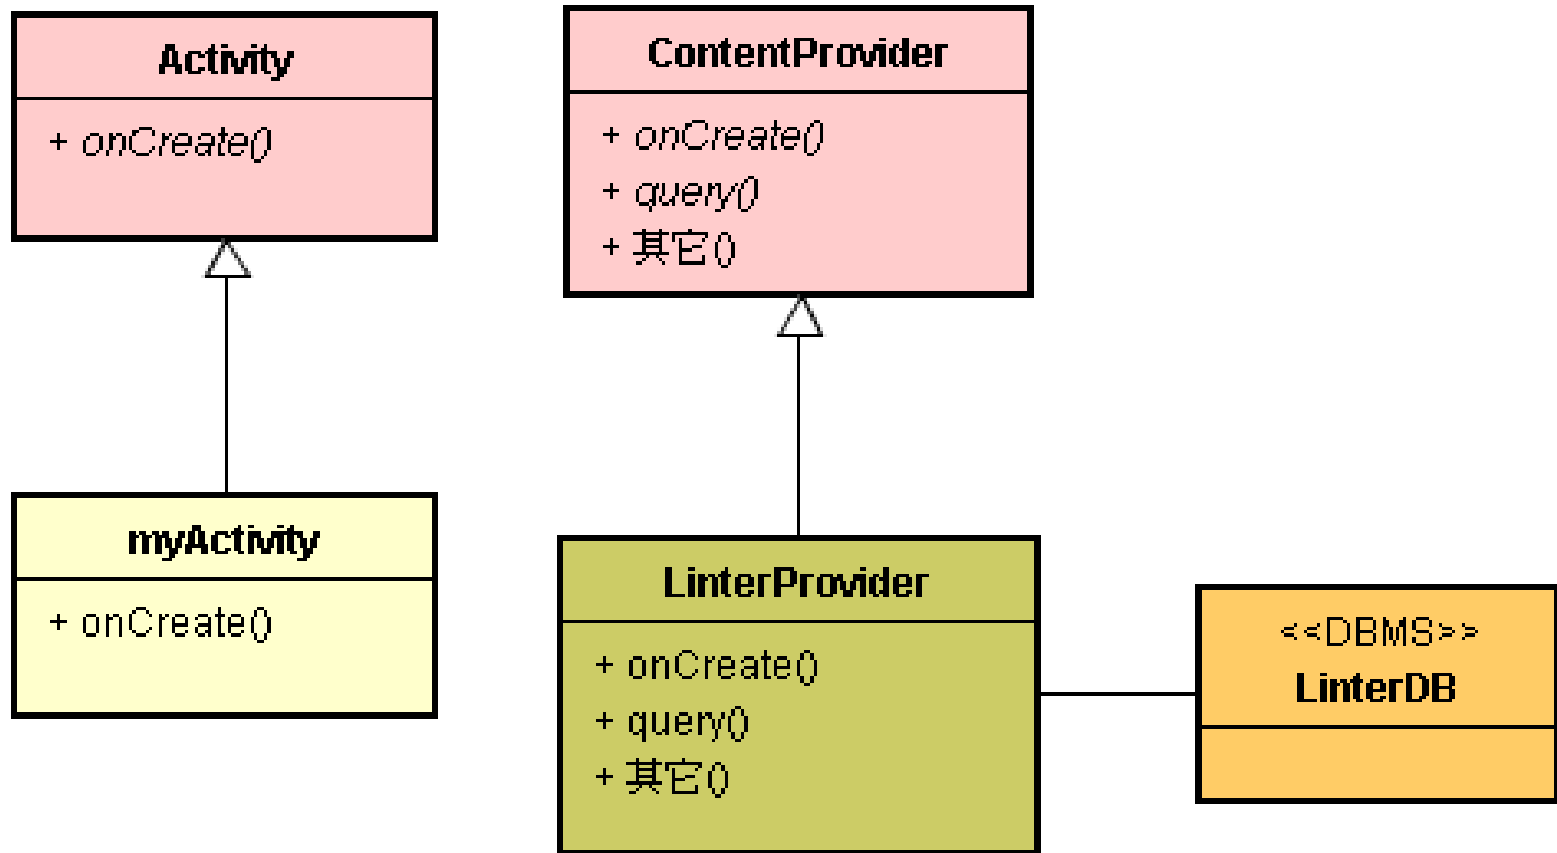

```
<provider android:name="DataProvider"  
          android:authorities="com.misoo.provider.rx09-02">  
</provider>
```

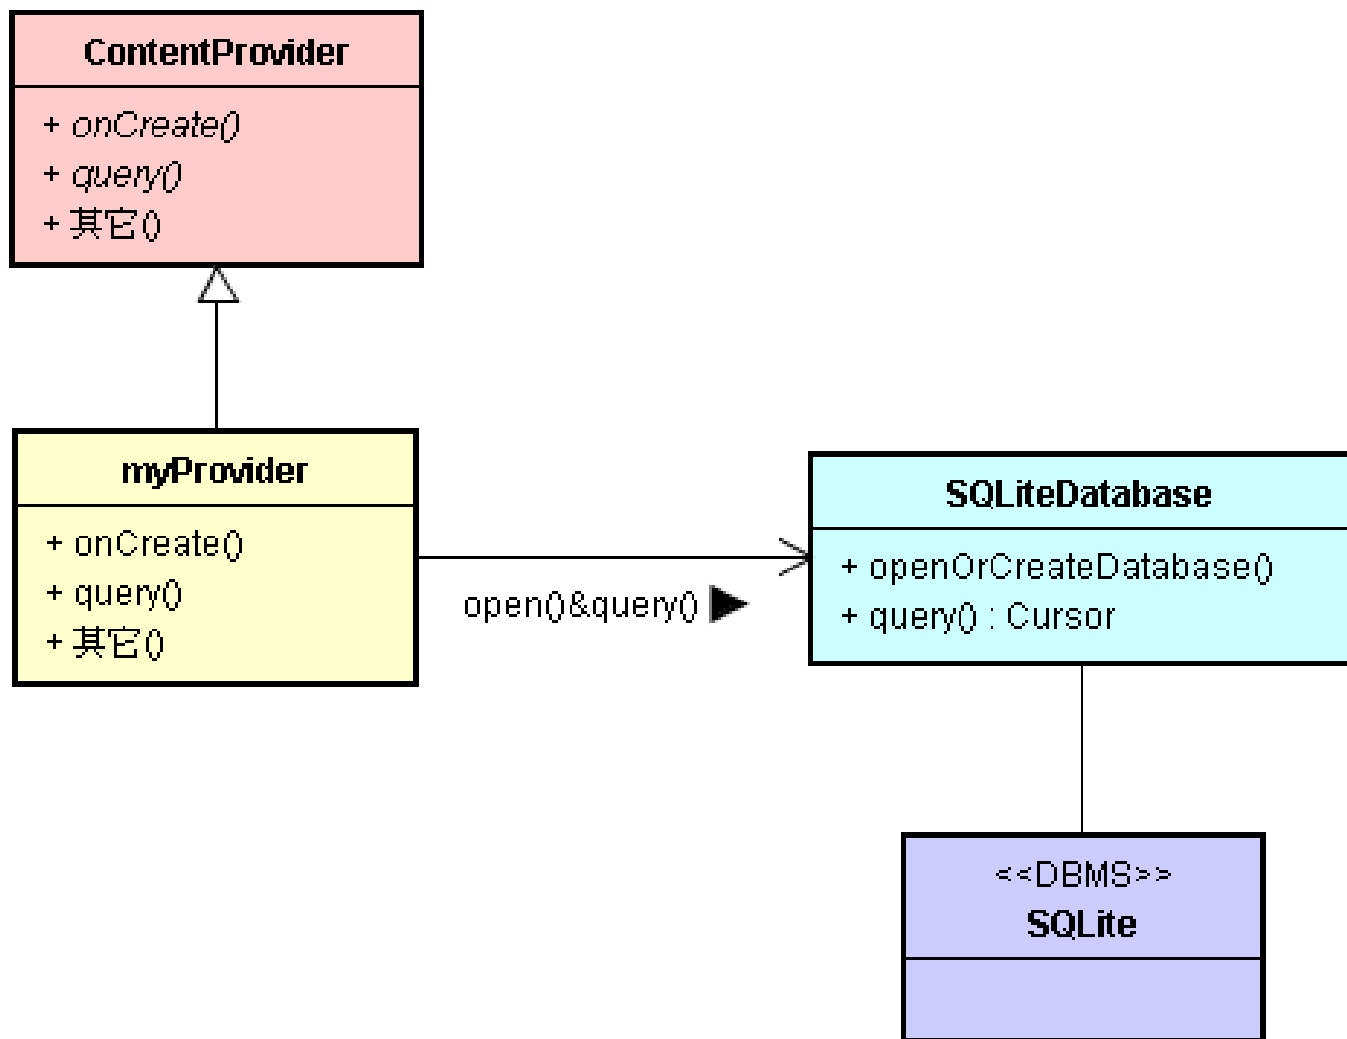

让ActivityManager可以
找到ContentProvider

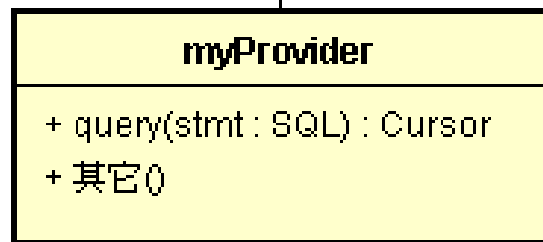

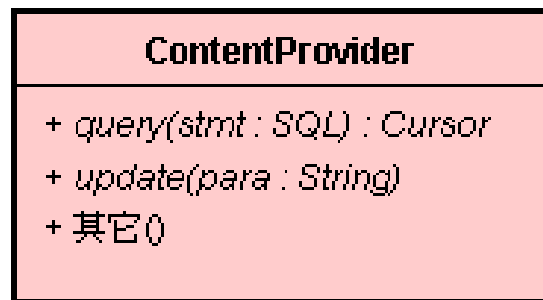

```
public class ac01 extends Activity {  
    //.....  
    Cursor cur =  
        getContentResolver().query(getIntent().getData(),  
            PROJECTION, null, null, null);  
    //.....  
}
```

这会找到ContentProvider
并调用onCreate()

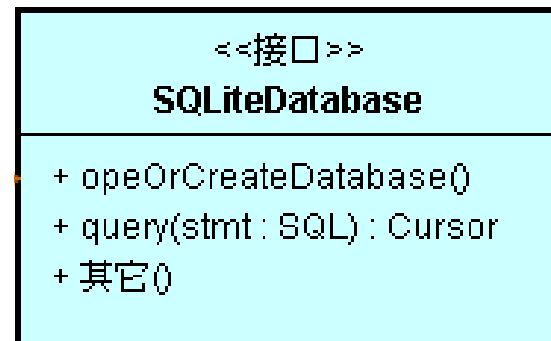

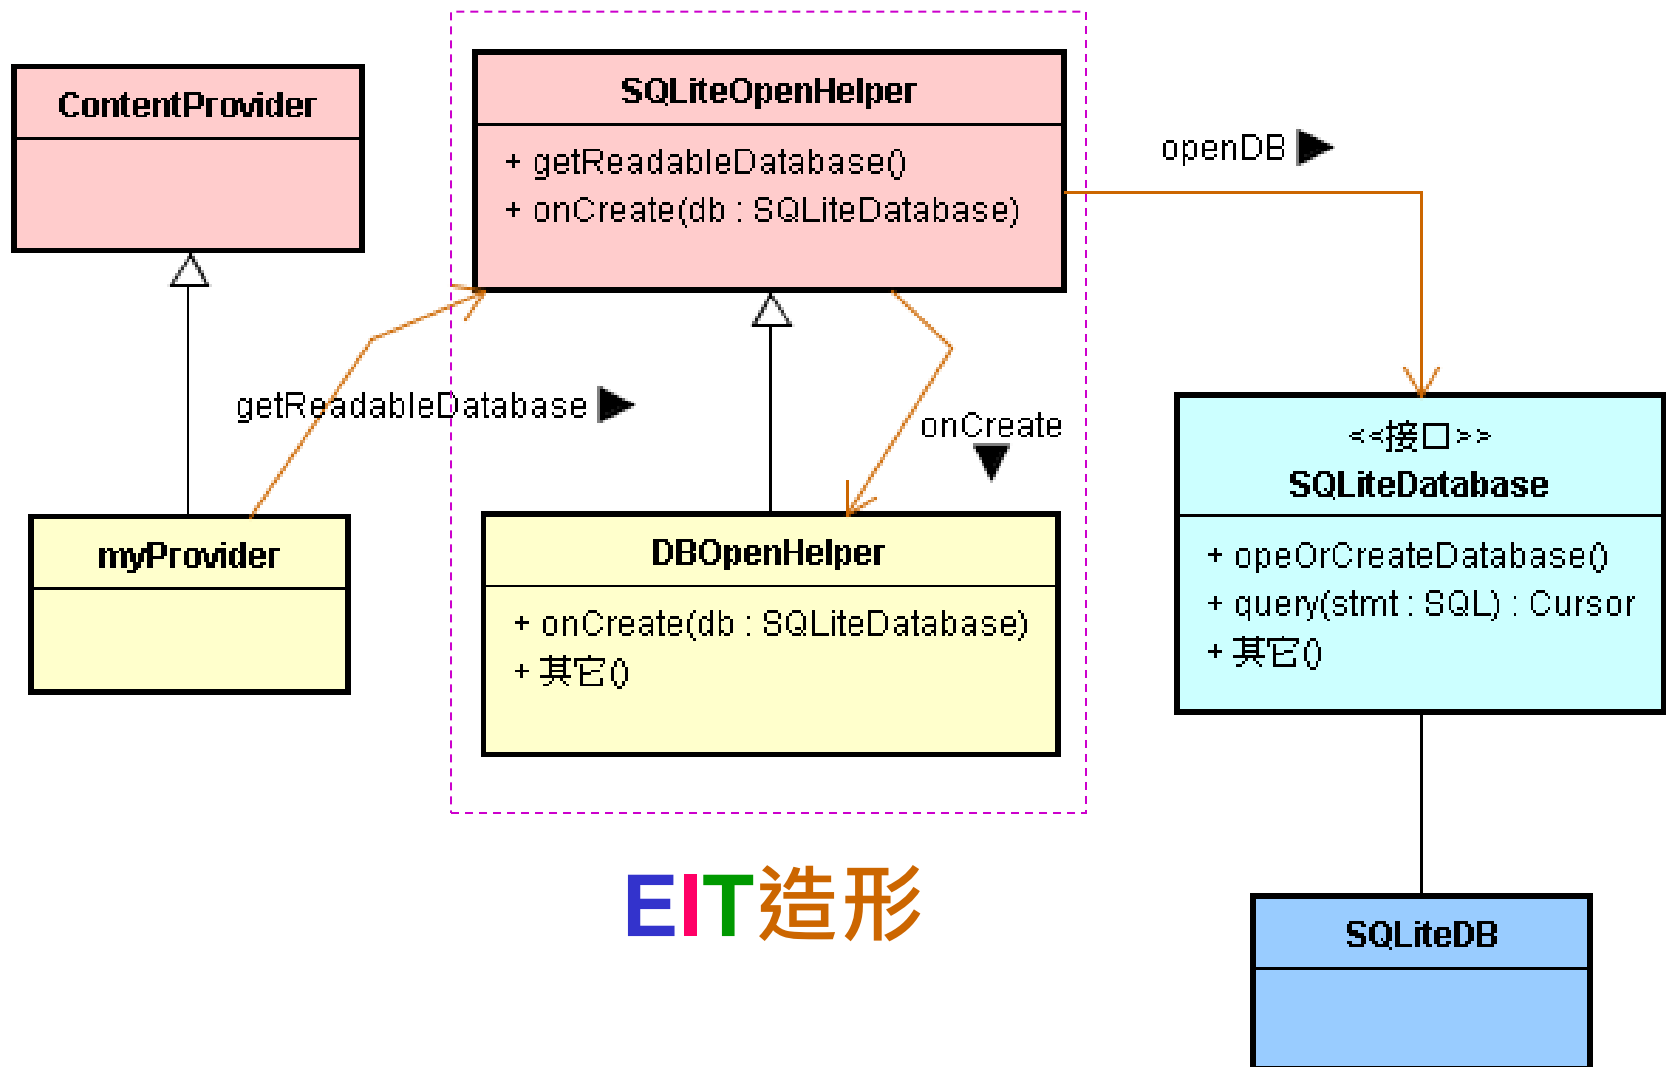

EIT
造形
